

FULL AIR SUSPENSION FOR RENAULT ESPACE

The Full Air Suspension System for the rear axle of the Renault Espace requires the removal of the existing coil springs. The Coils are replaced with specially designed Firestone Tapered Sleeve Air Springs which provide a soft progressive ride and comfort to the vehicle and its passengers.

The Ride Height is controlled by an Electronically Controlled Air Suspension

(ECAS) System, which also facilitates the raising and lowering of the rear chassis. This feature makes the vehicle extremely popular in the disability and ambulance market where easy access for wheelchairs and stretchers is achievable with this system.

BENEFITS OF AIR SUSPENSION:

- **Greatly Improves Comfort**
- **Improved Road Handling**
- **Lowering Facility**
- **Constant Ride Height**
