

Full Air Suspension for VW T5

EUROPEAN TYPE
APPROVED

2 YEAR GUARANTEE

The Full Air Suspension System for the rear axle of the Volkswagen T5 requires the removal of the existing coil springs. The Coils are replaced with large volume Firestone Air Springs which easily install into the existing spring locations. The Ride Height is controlled by an Electronically Controlled Air Suspension (ECAS) System, which also facilitates the raising and lowering of the rear chassis.

The Firestone Air Springs provide a soft progressive ride which is of particular benefit to the *Ambulance Market*. The Lowering facility at the rear enables easy access for wheelchair and stretcher use.

Indeed, this lowering feature is of great assistance for loading and un-loading in the *Commercial Market* also. Applications such as Mini-Artics, Demountable Camper Cabins, Transportation of Box Bodies, etc are becoming increasingly popular.

BENEFITS OF AIR SUSPENSION:

- Greatly Improves Comfort
- Improved Road Handling
- Lowering Facility
- Constant Ride Height
